Introduction

In 2014 Missouri legislators passed House Bill 1490, mandating the development of the Missouri Learning Expectations. In April of 2016, these Missouri Learning Expectations were adopted by the State Board of Education. Groups of Missouri educators from across the state collaborated to create the documents necessary to support the implementation of these expectations.

One of the documents developed is the item specification document, which includes all Missouri grade level/course expectations arranged by domains/strands. It defines what could be measured on a variety of assessments. The document serves as the foundation of the assessment development process.

Although teachers may use this document to provide clarity to the expectations, these specifications are intended for summative, benchmark, and large-scale assessment purposes.

Components of the item specifications include:

Expectation Unwrapped breaks down a list of clearly delineated content and skills the students are expected to know and be able to do upon mastery of the Expectation.

Depth of Knowledge (DOK) Ceiling indicates the highest level of cognitive complexity that would typically be assessed on a large scale assessment. The DOK ceiling is not intended to limit the complexity one might reach in classroom instruction.

Item Format indicates the types of items used in large scale assessment. For each expectation, the item format specifies the type best suited for that particular expectation.

Text Types suggests a broad list of text types for both literary and informational expectations. This list is not intended to be all inclusive: other text types may be used in the classroom setting. The expectations were written in grade level bands; for this reason, the progression of the expectations relies upon increasing levels of quantitative and qualitative text complexities.

High School Geometry

Content Limits/Assessment Boundaries are parameters that item writers should consider when developing a large scale assessment. For example, some expectations should not be assessed on a large scale assessment but are better suited for local assessment.

Sample stems are examples that address the specific elements of each expectation and address varying DOK levels. The sample stems provided in this document are in no way intended to limit the depth and breadth of possible item stems. The expectation should be assessed in a variety of ways.

High School Geometry

Frequently asked questions for Item Specification and Sample Stems

1. What is the purpose of the Item Specification document?

Historically, Item Specification documents are written for test item writers. In Missouri, this document was seen as a resource for not only item writers, but teachers as well. The unwrapped section should provide more detail on the meaning of the standard and the sample stems should provide example items that also help clarify the standard. In this update, the language used in the Expanded Expectations document was included to merge the two documents for easier access. In some standards a “Notes” section was added to provide additional information.

2. Why do some unwrapped sections have the same few sentences at the beginning?

For standards that have multiple parts and are listed as sub expectations, e.g., NF.C.5.b, the first part highlights the intent of that standard series. Often, these standards should be taught together as they develop a bigger idea or concept.

3. Why is the Fluency definition only on some standards?

Certainly, students having experience using different strategies and picking the strategy they feel best for given situations is important to improving student knowledge in mathematics. The Missouri Educators working on the document felt it important to highlight areas where student access to multiple strategies would provide the greatest support. Listing fluency in all standards would likely lessen the impact needed.

4. What does the “e.g.” mean when listed in the unwrapped section?

The “e.g.” is a way to highlight a list of examples, ideas, or concepts. It is **not** an exhaustive list, nor is it intended to represent the best examples. It is merely a partial list to provide some examples.

5. What does “with or without context” mean?

This phrase was used to highlight that the math problems might have some situational context or could possibly be a strictly number or symbol situation. The Educators working on this update wanted the focus to be on using math to solve problem situations rather than a focus on “real world” problems.

6. Are the Sample Stems examples of summative test items?

The Sample Stems could be a classroom item or possibly an assessment item. In some cases, the problem used would have to be adjusted to use on a Statewide assessment. The goal was to give students and teachers a problem that aligns to the standard. The Stems provided in the document are an example. The educators assisting with the update in some cases created more than one example and those are listed at the bottom of the document. All examples are good, some fit better on the page within the Item Specification which have determined those shown in both places.

7. Why are there no answers listed with the Sample Stems?

The focus of the Sample Stems should be on the work students can demonstrate to indicate their level of understanding for the given standard. While the answer is one component, when given, it frequently becomes the focus which does not provide important information in the learning process.

8. What does “No Limits” mean in the Limits and Boundaries section?

Where there are no limits or boundaries to be listed, “No Limits” was used to indicate this situation and help those using the document understand that it wasn’t an oversight. IMPORTANT NOTE: if the standard itself or the cluster heading lists a specific limit, e.g., specific denominators, size or type of number, that was not duplicated in the Limits section.

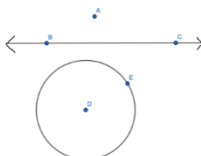

9. Why do some words show a short definition?

While this does not serve as a replacement for a glossary, there were terms within the unwrapping that the committee felt should have meaning included. This occurs in the standard where it specifically addresses the concept in the standard, e.g., cardinality, trapezoid.

10. Why are Kindergarten and Grade 1 Sample Stems a bit different?

Students in Kindergarten and Grade 1 are beginning readers, so teachers should expect to read problems to the students rather than only providing problems to be solved.

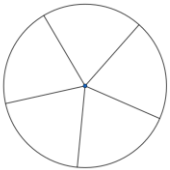

High School Geometry

Mathematics		G.CO.A.1
CO A 1	Congruence Experiment with transformations in the plane. Define angle, circle, perpendicular line, parallel line, line segment and ray based on the undefined notions of point, line, distance along a line and distance around a circular arc.	
<u>Expectation Unwrapped – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.</u> The student will use the undefined notions (terms) of point, line, and plane to develop mathematical definitions of angle, circle, perpendicular line, parallel line, line segment and ray. The student would use distance around a circular arc as part of the definition of an angle and use the distance along a line as a part of the definition of a line segment.		<u>Sample Stems</u> Describe how an angle is related to points, lines, distance along a line, and/or distance around a circular arc.  You may want to identify an angle to assist with the description. Additional Stems for Geometry Found at End of Document.

Mathematics

G.SRT.C.5

- SRT** Similarity, Right Triangles, and Trigonometry
C Define trigonometric ratios, solve problems involving right triangles.
5 Understand that side ratios in right triangles define the trigonometric ratios for acute angles.

Expectation Unwrapped – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

The student will understand that side ratios in right triangles define the trigonometric ratios (sine, cosine, tangent, secant, cosecant, cotangent) for acute angles.

$$\sin \text{ of } \theta = \sin \theta = \frac{\text{opposite}}{\text{hypotenuse}}$$

$$\cos \text{ine of } \theta = \cos \theta = \frac{\text{adjacent}}{\text{hypotenuse}}$$

$$\tan \text{gent of } \theta = \tan \theta = \frac{\text{opposite}}{\text{adjacent}}$$

$$\text{cosecant of } \theta = \csc \theta = \frac{\text{hypotenuse}}{\text{opposite}}$$

$$\sec \text{ant of } \theta = \sec \theta = \frac{\text{hypotenuse}}{\text{adjacent}}$$

$$\cot \text{angent of } \theta = \cot \theta = \frac{\text{adjacent}}{\text{opposite}}$$

Sample Stems

Roll 2 ten-sided dice. Using either graph paper and physical tools or a digital tool, draw a right triangle $\triangle ABC$ where angle B is a right angle, and the length of legs \overline{AB} and \overline{BC} are equal to the rolls on your dice.

Then, find the length of hypotenuse \overline{AC} and list the following ratios:

$$\frac{AB}{AC} \quad \frac{BC}{AC} \quad \frac{AB}{BC} \quad \frac{AC}{AB} \quad \frac{AC}{BC} \quad \frac{BC}{AB}$$

Then dilate $\triangle ABC$ from center A by a scale factor of your choice to obtain $\triangle A'B'C'$, then list the following ratios:

$$\frac{A'B'}{A'C'} \quad \frac{B'C'}{A'C'} \quad \frac{A'B'}{B'C'} \quad \frac{A'C'}{A'B'} \quad \frac{A'C'}{B'C'} \quad \frac{B'C'}{A'B'}$$

What do you notice about the corresponding ratios?

- SRT** Similarity, Right Triangles, and Trigonometry
C Define trigonometric ratios, solve problems involving right triangles.
8 Derive the formula $A = \frac{1}{2} ab \sin(C)$ for the area of a triangle.

Expectation Unwrapped – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

The student will derive the formula $A = \frac{1}{2} ab \sin(C)$ for the area of a triangle, e.g., student will explain how the area formula of triangle ABC relates to $A = \frac{1}{2} ab \sin(C)$.

Sample Stems

$\triangle ABC$ is shown below, with perpendicular height h .

First, write the area of $\triangle ABC$ using the necessary dimensions given in the diagram.

Next, write the sine of angle C as a ratio of side lengths, then solve for h .

Finally, substitute the value of h you obtained in the previous into the formula for the area of your triangle.

Exploring Geometric Properties with Equations

A

Translate between the geometric description and the equation for a conic section.

2

Derive the equation of a parabola given a focus and directrix.

Expectation Unwrapped – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.

The student will demonstrate or explain the relationships involved with the equation of a parabola, e.g. use the fact that the distances from any point on the parabola to a given focus and to a given directrix are equal to develop the formula $(x - h)^2 = 4p(y - k)$.

Sample Stems

A parabola is shown below, alongside other points and a line.

Use the distance formula to represent the distance from point A to the focus, $(h, k + p)$.

Next, use the distance formula to represent the distance from point A to a point on the directrix $(x, k - p)$.

Finally, use the fact that the distance from parts a and b are equal to generate an equivalent representation for the equation of the parabola.

Additional Stems for Geometry

Mathematics		G.CP.A.7
CP A 7	Conditional Probability and Rules of Probability Understand independence and conditional probability and use them to interpret data. Apply and Interpret the general Multiplication Rule in a uniform probability model.	
<u>Expectation Unwrapped – the intent of this section is to describe the elements of the expectation, but are NOT additional standards or expectations.</u> The student will apply and interpret the general Multiplication Rule in a uniform probability model. For Geometry, the Multiplication Rule is when A and B are dependent events, then the probability of both events occurring simultaneously is given by: $P(A \cap B) = P(B) \cdot P(A B)$, or when A and B are two independent events in an experiment, then the probability of both events occurring simultaneously is given by: $P(A \cap B) = P(A) \cdot P(B)$.		<u>Sample Stems</u> A population of 1000 people undergo a genetic test for a particular gene. The test for the genetic marker has a 1% false negative rate (that is, if they test negative, there’s a 1% chance they carry the gene) and a 6% false positive rate (if they test positive, there is a 6% chance they don’t carry the gene). If 20% of the population of 1000 people test positive for the genetic marker, approximately how many people have the gene?

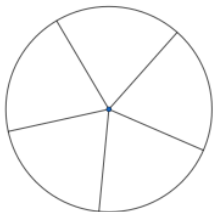

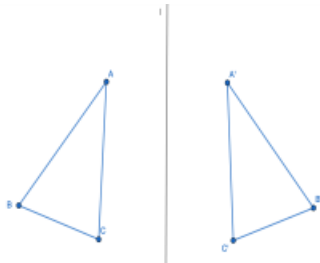

High School Geometry

Code	Sample Stem	Explanation
G.CO.A.1	<p>Describe how an angle is related to points, lines, distance along a line, and/or distance around a circular arc.</p>  <p>You may want to identify an angle to assist with the description.</p>	<p>NOTE: This problem is still a work in progress</p> <p>This should be done either with physical objects (such as cutouts of a point and line) or using virtual manipulatives (such as Geogebra).</p> <p>Student approaches might include a verbal description, labeled parts of a diagram, and/or a demonstration showing the relationships between the objects, or other approaches.</p>
	<p>Plot a quadrilateral in the coordinate plane and list the coordinates of each vertex. This will be quadrilateral ABCD, used in all 3 parts.</p> <p>Add 2 to each x-coordinate of quadrilateral ABCD and plot the new quadrilateral. Compare and contrast the new quadrilateral with the preimage and express this transformation with function notation.</p>	<p>The purpose of this series of problems is to use tools (which can include graph paper, online tools, or other manipulatives) to explore transformations' effects on figures.</p> <p>For this part, comparisons should include preservation of side length and angle measure (ie, congruence), and differences should include location (and orientation in the case of B). For A, function notation would be $f(x,y) \rightarrow f(x+2,y)$</p>
G.CO.A.2	<p>Plot a quadrilateral in the coordinate plane and list the coordinates of each vertex. This will be quadrilateral ABCD, used in all 3 parts.</p> <p>Take the opposite of each y coordinate of quadrilateral ABCD and plot the new quadrilateral. Compare and contrast the new quadrilateral with the preimage and express this transformation with function notation.</p>	<p>The purpose of this series of problems is to use tools (which can include graph paper, online tools, or other manipulatives) to explore transformations' effects on figures.</p> <p>For this part, comparisons should include preservation of side length and angle measure (ie, congruence), and differences should include location (and orientation in the case of B). For A, function notation would be $f(x,y) \rightarrow f(x+2,y)$</p> <p>Also for this part, function notation would be $f(x,y) \rightarrow f(x,-y)$</p>
	<p>Plot a quadrilateral in the coordinate plane and list the coordinates of each vertex. This will be quadrilateral ABCD, used in all 3 parts.</p>	<p>The purpose of this series of problems is to use tools (which can include graph paper, online tools, or other manipulatives) to explore transformations' effects on figures.</p>

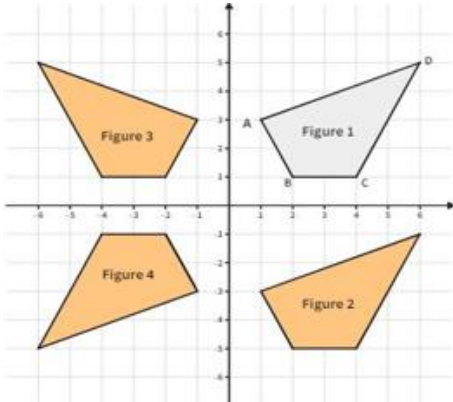

High School Geometry

	<p>Multiply each x and y coordinate of quadrilateral ABCD by $\frac{1}{2}$. Compare and contrast the new quadrilateral with the preimage and express this transformation with function notation.</p>	<p>For this part, comparisons should include preservation of angle measure, while the side lengths are different, but proportional.</p>
Code	Sample Stem	Explanation
G.CO.A.3	<p>The side view of a wheelbarrow wheel is shown below.</p>  <p>If you watched the wheelbarrow wheel as it was pushed, what would you observe about the wheel's rotation and reflection?</p>	<p>The purpose of this question is to explore rotational symmetry.</p>
G.CO.A.4	<p>$\triangle ABC$ has been reflected across line l to obtain $\triangle A'B'C'$:</p>  <p>Sarah notices that if she connects each point to its image (A to A', B to B', C to C'), the resulting line segments will be perpendicular to line l. She thinks she can describe reflection in terms of line segments and perpendicular lines. What could her description look like?</p>	<p>The purpose of this problem is to expand upon the more informal definition of reflection from grade 8. Encourage students to use virtual or physical tools to manipulate the triangles to further explore the connection between the line of reflection and the line segment connecting each point to its image.</p>
G.CO.A.4	<p>Using a geometry tool, create three line segments $\overline{AA'}$, $\overline{BB'}$, and $\overline{CC'}$, each divided by line l (one possible example is shown below).</p>	<p>The purpose of this problem is to expand upon the more informal definition of reflection from grade 8. Encourage</p>

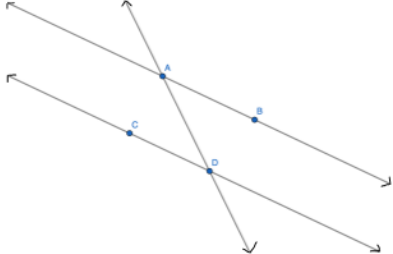

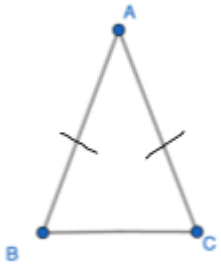

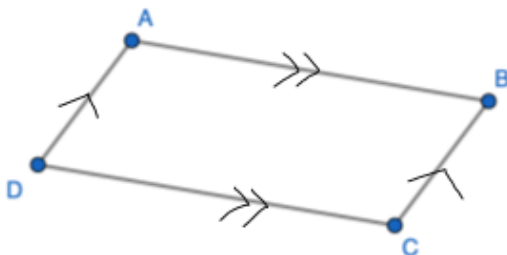

High School Geometry

	<div><p>Arrange the three line segments so that $\triangle A'B'C'$ is a reflection of $\triangle ABC$ across line l. What do you notice about the line segments and line l?</p></div>	students to use virtual or physical tools to manipulate the triangles to further explore the connection between the line of reflection and the line segment connecting each point to its image.
Code	Sample Stem	Explanation
G.CO.A.5	<p>Figure A is shown below:</p> <div><p>Figure A</p></div> <p>Roll a standard 6-sided die twice. If the roll is:</p> <ul style="list-style-type: none">1 or 2: Perform a translation on figure A3 or 4: Perform a reflection on figure A5 or 6: Perform a rotation on figure A <p>Label the image A', then describe the sequence of transformations you followed.</p> <p>Then trade your figures A and A' with a partner's figures and describe the sequence of transformations that would map their figure to their image.</p>	<p>The purpose of this question is to explore rigid motions through technology or physical manipulatives (such as transparency paper).</p>

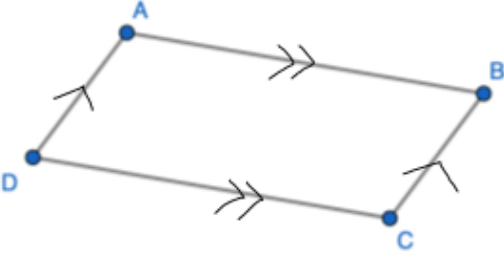

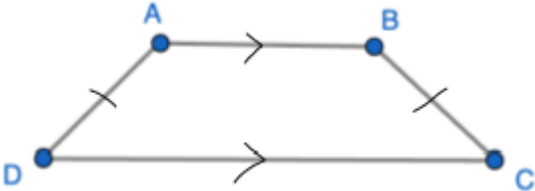

High School Geometry

Code	Sample Stem	Explanation
G.CO.B.6	<p>Figure 1 has been transformed into each of the other figures shown below.</p>  <p>First, describe what you notice about figure 1 and each of its images. What must be true about figures 2, 3, and 4?</p> <p>Then, describe a sequence of transformations that would map figure 2 to figure 4.</p>	<p>The purpose of this question is to continue to expand upon the explorations the student began in grade 8 on congruence in terms of rigid motions.</p>
G.CO.B.7	<p>Draw two different line segments, \overline{AB} and \overline{BC}, meeting at point B. Name the resulting angle $\angle ABC$.</p> <p>Then perform any rigid motion transformation (translation, reflection, or rotation) on $\angle ABC$. Label the image $\angle A'B'C'$.</p> <p>Next, connect point A to C, and connect point A' to C', to create $\triangle ABC$ and $\triangle A'B'C'$. Are the two triangles congruent? How do you know?</p> <p>Draw two acute angles that share a common side.</p> <p>Then perform any rigid motion transformation (translation, reflection, or rotation) on your figure.</p> <p>Next, extend the angles in both the image and preimage to create two triangles (if needed). Are the two triangles congruent? How do you know?</p>	<p>The purpose of this question is to explore the use of rigid motions to establish SAS criteria for triangle congruence using either virtual or physical manipulatives.</p> <p>After students do this, facilitate a conversation regarding how the triangles must be congruent, despite starting off with only two pairs of congruent sides and the angle they form.</p> <p>The purpose of this question is to explore the use of rigid motions to establish ASA criteria for triangle congruence using either virtual or physical manipulatives.</p> <p>After students do this, facilitate a conversation regarding how the triangles must be congruent, despite starting off with only two congruent pairs of angles and the common side.</p>

Code	Sample Stem	Explanation
G.CO.C.8	<p>In the diagram below, line AB is parallel to line CD.</p>  <p>Prove that $\angle BAD \cong \angle CDA$</p>	<p>While students already explored the angle relationships formed by parallel lines cut by a transversal, one of the expectations in Geometry is to construct a formal proof of these relationships.</p> <p>Note that you can change the angles in the prompt to address other angle pairs.</p>
G.CO.C.9	<p>An example of an isosceles triangle is shown, with congruent sides \overline{AB} and \overline{AC}:</p>  <p>Prove that the base angles of this isosceles triangle, $\angle B$ and $\angle C$, are congruent.</p>	
G.CO.C.10	<p>Parallelogram ABCD is shown, where $\overline{AD} \parallel \overline{BC}$ and $\overline{AB} \parallel \overline{DC}$:</p>  <p>Prove that the opposite sides of parallelogram ABCD are congruent.</p>	

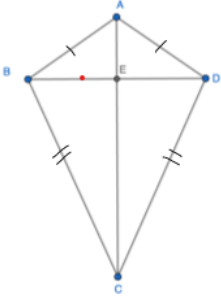

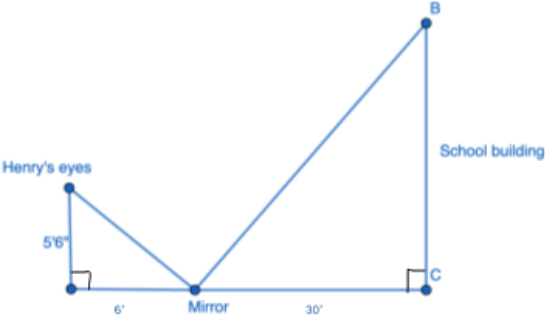

High School Geometry

	<p>Parallelogram ABCD is shown, where $\overline{AD} \parallel \overline{BC}$ and $\overline{AB} \parallel \overline{DC}$:</p>  <p>Prove that the opposite angles of parallelogram ABCD are congruent.</p>	
	<p>Isosceles trapezoid ABCD, with parallel sides \overline{AB} and \overline{CD} and congruent sides \overline{AD} and \overline{BC} is shown:</p>  <p>Prove that the base angles of isosceles trapezoid ABCD, $\angle C$ and $\angle D$, are congruent.</p>	
Code	Sample Stem	Explanation
G.CO.D.11	<p>Draw a line segment, \overline{AB}, either on paper or on a virtual tool.</p> <p>Then roll a 6-sided die and construct the result: Roll a 1 or 2) Copy \overline{AB} Roll a 3 or 4) Construct the perpendicular bisector of \overline{AB} Roll a 5 or 6) Construct a line segment parallel to \overline{AB}</p> <p>Then, guide a partner to reproduce your construction, either with verbal or written instructions.</p>	Students can use a variety of tools and methods to perform their formal construction, not just a straightedge and compass.
	<p>Draw a line segment, \overline{AB}, either on paper or on a virtual tool. Then, construct a square whose side lengths are equal to AB.</p> <p>Finally, find a partner who used a different tool than you did to construct their square, and guide that partner to reproduce your construction, either with verbal or written instructions.</p>	Students can use a variety of tools and methods to perform their formal construction, not just a straightedge and compass.

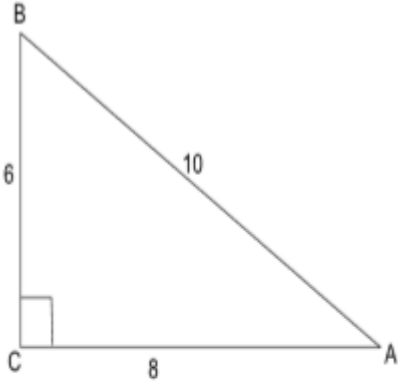

High School Geometry

Code	Sample Stem	Explanation
G.SRT.A.1	<p>Using paper or a digital tool, draw any quadrilateral ABCD, then draw another point labeled E.</p> <p>Measure each side length of quadrilateral ABCD, then dilate quadrilateral ABCD from center E by your choice of scale factor.</p> <p>What do you notice about the sides of your preimage, quadrilateral ABCD, and the image?</p>	Once each student has completed their quadrilateral and dilation, facilitate a conversation for the side comparisons.
G.SRT.A.2	<p>Given the figure below, justify using transformations which triangle is similar to triangle ABC:</p>  <p>Then verify the relationship between the corresponding side lengths and corresponding angle measures of the similar triangles.</p>	
G.SRT.A.3	<p>With a partner, choose two angle measures that have a sum of less than 180°. Then, each partner should draw two angles with those measures using either physical or digital tools so that the two angles share a side, but not a vertex.</p> <p>Then extend the two angles until both partners have drawn a triangle.</p> <p>Measure the side lengths and angle measures of your triangle and compare the measurements to your partner's triangle.</p> <p>What do you notice about the two triangles? Do you think this will always be true?</p>	The purpose of this exploration is to establish the Angle-Angle criteria for triangle congruence.

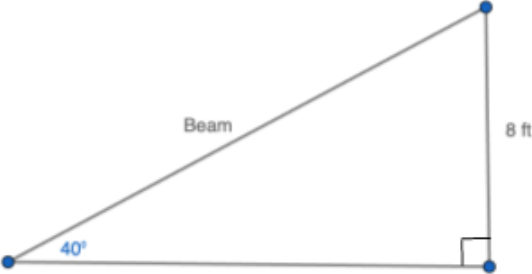

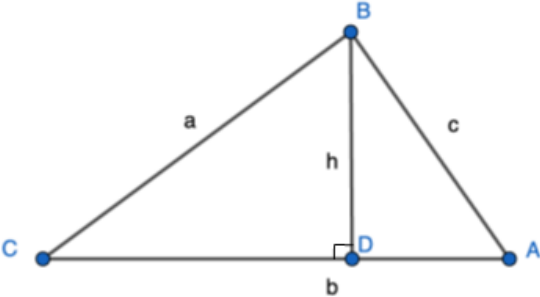

High School Geometry

Code	Sample Stem	Explanation
G.SRT.B.4	<p>Kite ABCD is shown, where $AB = AD$ and $BC = DC$:</p>  <p>Which triangles in the diagram are congruent? Write a proof for your congruence statement.</p> <p>Are any of the triangles shown similar? Justify your response.</p>	<p>Note that $\triangle ABC$, $\triangle ADC$, $\triangle ABD$, and $\triangle CBD$ are also triangles in the diagram</p>
	<p>Henry is trying to determine the height of his school building. To do so, he places a mirror on the ground and positions himself so that he can see the top of the building in the mirror. He measures the distance between him and the mirror, and the distance between the mirror and the building. Henry then draws the following diagram with the measurements he made.</p>  <p>Find the height of the school building and justify your answer.</p>	<p>Note that this problem can be explored by students instead – use mirrors, tape measures, and justify similar triangles to find the height of a tall object (such as a building or a tree).</p>
G.SRT.C.5	<p>Roll 2 ten-sided dice. Using either graph paper and physical tools or a digital tool, draw a right triangle $\triangle ABC$ where angle B is a right angle, and the length of legs \overline{AB} and \overline{BC} are equal to the rolls on your dice.</p> <p>Then, find the length of hypotenuse \overline{AC} and list the following ratios:</p> <div>$\frac{AB}{AC}$ $\frac{BC}{AC}$ $\frac{AB}{BC}$ $\frac{AC}{AB}$ $\frac{AC}{BC}$ $\frac{BC}{AB}$</div>	<p>The purpose of this exploration is to discover how the trigonometric ratios are a consequence of dilation of a right triangle.</p> <p>During the conversation that occurs after the conversation, formalize the language of sine, cosine, tangent, cosecant, secant, and cotangent of an angle.</p>

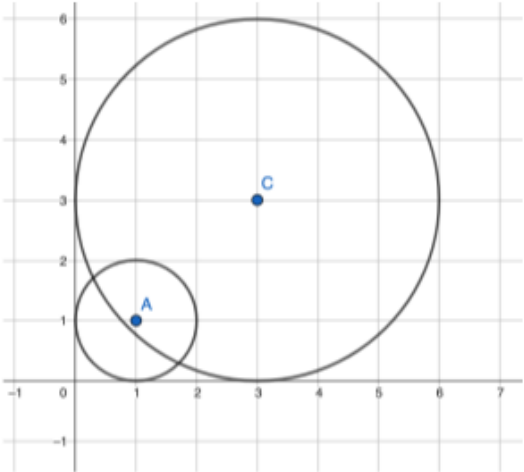

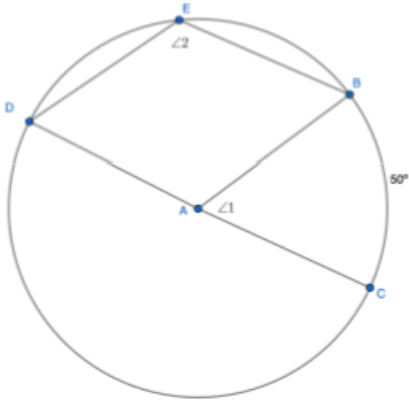

High School Geometry

	<p>Then dilate $\triangle ABC$ from center A by a scale factor of your choice to obtain $\triangle A'B'C'$, then list the following ratios:</p> $\frac{A'B'}{A'C'} \quad \frac{B'C'}{A'C'} \quad \frac{A'B'}{B'C'} \quad \frac{A'C'}{A'B'} \quad \frac{A'C'}{B'C'} \quad \frac{B'C'}{A'B'}$ <p>What do you notice about the corresponding ratios?</p>	
Code	Sample Stem	Explanation
G.SRT.C.6	<p>Use the information from the triangle to write the following trigonometric ratios:</p> <div>  <p> $\sin(A) = \frac{\text{opposite}}{\text{hypotenuse}} =$ $\cos(A) = \frac{\text{adjacent}}{\text{hypotenuse}} =$ $\tan(A) = \frac{\text{opposite}}{\text{adjacent}} =$ $\sin(B) =$ $\cos(B) =$ $\tan(B) =$ </p> <p>What do you notice about the relationships between the trigonometric ratios of the two different reference angles in this right triangle?</p> <p>Given a right triangle with the following trigonometric ratio: $\sin(40) = ?$</p> </div>	<p>Another option is to randomly select Pythagorean triples for each student and have them carry out this same exploration to notice the relationship between the sine of an angle and the cosine of its complement.</p>

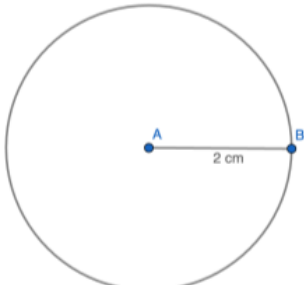

High School Geometry

Code	Sample Stem	Explanation
G.SRT.C.7	<p>A construction crew wants to hoist a heavy beam so that it is standing up straight. They tie a rope to the beam, secure the base, and pull the rope through a pulley to raise one end of the beam from the ground. When the beam makes an angle of 40 degrees with the ground, the top of the beam is 8 ft above the ground.</p>  <p>The construction site has some telephone wires crossing it. The workers are concerned that the beam may hit the wires. When the beam makes an angle of 60 degrees with the ground, the wires are 2 ft above the top of the beam. Will the beam clear the wires on its way to standing up straight? Explain your answer.</p>	
G.SRT.C.8	<p>$\triangle ABC$ is shown below, with perpendicular height h.</p>  <p>First, write the area of $\triangle ABC$ using the necessary dimensions given in the diagram.</p> <p>Next, write the sine of angle C as a ratio of side lengths, then solve for h.</p> <p>Finally, substitute the value of h you obtained in the previous into the formula for the area of your triangle.</p>

Code	Sample Stem	Explanation
G.GMD.A.1	<p>Label the center of the circle provided and cut the paper circle into four equal sectors. Note your circle's diameter and circumference.</p> <p>Then, arrange the four sectors so that they're next to each other, with the center of the circle pointing up and down, alternating for each sector. Does this form a familiar shape?</p> <p>Next, cut each of your four sectors in half so you have eight equal sectors, then arrange the eight sectors so that they're next to each other, with the center of the circle pointing up and down, alternating for each sector.</p> <p>What do you notice about the resulting figure?</p> <p>Find this figure's length, height, and area.</p>	<p>Provide circles of different diameters, e.g., 6-inch, 8-inch, 10-inch for students to use. This exploration is meant to show an informal argument for the area of a circle by forming a parallelogram using the relationship between the parallelogram's base and the circle's circumference.</p>
	<p>Stack ten flat, circular cookies vertically. What solid does the stack of cookies form? What is the volume of this solid?</p> <p>Then, carefully adjust the stack of cookies so that the top cookie is not directly above the bottom cookie. What is the volume of this solid? Did the volume change when you adjusted the stack?</p>	<p>Note: You can use any flat stackable circular objects for this exploration.</p> <p>The goal is to explore the volume of a non-right cylinder using Cavalieri's Principle (the flat stackable objects are the cross sections of the cylinder, and because each object has the same cross-sectional area when they're moved, the volume of the stack will remain the same).</p>
G.GMD.A.2	<p>The cone below has a radius of 5 cm and a volume of 120 cubic cm.</p>  <p>What is the slant height of the cone?</p>	

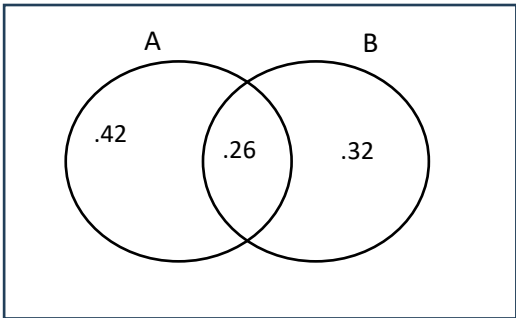

High School Geometry

Code	Sample Stem	Explanation
G.GMD.B.3	Use a piece of thin string to cut cylindrical marshmallows in different ways. Draw the two-dimensions cross sections you create by cutting the marshmallow in this way. Create as many different cross sections as you can.	Note that you can adjust the manipulatives to suit your needs (e.g., you can use a block of tofu to explore cross sections of rectangular prisms, or use plastic utensils instead of a thin string)
G.GMD.B.4	Tape a standard index card to the top of a pencil (so that it resembles a small flag). Then, rapidly rotate the pencil while holding it still so that the notecard rotates around the pencil. As the notecard rotates, what three dimensional solid would be formed in the space that the notecard moves through?	This activity is meant to simulate rotating a rectangle (the notecard) about an axis (the pencil) to create a solid of revolution (in this case, a cylinder).
G.MG.A.1	Use geometric shapes to describe how to find the volume the water tower shown below could hold. 	
G.MG.A.2	An umbrella in the shape of a cone is open during a snowstorm. The umbrella has a base radius of 4 feet and a height of 1 foot. Snow accumulates on top of the umbrella evenly, to a depth of 5 inches and weighs 5 pounds. What is the volume of snow on top of the umbrella? (Remember that $p=m/V$, where p = density, m = mass, v = volume)

G.CP.A.2	<p>The table below shows some of the results of a survey given to 3rd and 4th grade students about their favorite ice cream flavors. The students were asked which flavor they preferred between strawberry and chocolate, and some of the numbers of students who preferred each are shown:</p> <table border="1"><thead><tr><th></th><th>Strawberry</th><th>Chocolate</th><th>Total</th></tr></thead><tbody><tr><td>3rd Grade</td><td></td><td>24</td><td></td></tr><tr><td>4th Grade</td><td>10</td><td>30</td><td>40</td></tr></tbody></table> <p>If a student's grade level and ice cream preference are independent, how many 3rd grade students preferred strawberry ice cream?</p>		Strawberry	Chocolate	Total	3 rd Grade		24		4 th Grade	10	30	40					
	Strawberry	Chocolate	Total															
3 rd Grade		24																
4 th Grade	10	30	40															
G.CP.A.3	<p>A Venn diagram of events A and B and their probabilities is shown below:</p>  <p>Find and interpret $P(A B)$</p>																	
G.CP.A.4	<p>The table below shows some of the results of a survey given to 3rd and 4th grade students about their favorite ice cream flavors. The students were asked which flavor they preferred between strawberry and chocolate, and the numbers of students who preferred each are shown:</p> <table border="1"><thead><tr><th></th><th>Strawberry</th><th>Chocolate</th><th>Total</th></tr></thead><tbody><tr><td>3rd Grade</td><td>18</td><td>32</td><td>50</td></tr><tr><td>4th Grade</td><td>12</td><td>38</td><td>50</td></tr><tr><td>Total</td><td>30</td><td>70</td><td>100</td></tr></tbody></table> <p>If a randomly chosen student prefers chocolate ice cream, what is the probability that this student is in 3rd grade?</p>		Strawberry	Chocolate	Total	3 rd Grade	18	32	50	4 th Grade	12	38	50	Total	30	70	100	<p>Students could also be provided with the survey results as a list (e.g., 18 3rd graders prefer strawberry, 32 3rd graders prefer chocolate, and so on) then have students construct a 2-way table before asking a similar question.</p>
	Strawberry	Chocolate	Total															
3 rd Grade	18	32	50															
4 th Grade	12	38	50															
Total	30	70	100															

High School Geometry

Code	Sample Stem	Explanation
G.CP.A.5	<p>A student is playing a game that involves them flipping a coin and then rolling a 6-sided die. Let A represent the event of the coin landing on heads and B represent the event of rolling a 6.</p> <p>Sarah concludes that A and B are independent events. What does this mean in context of events A and B?</p> <p>Raul concludes that $P(A B) = \frac{1}{6}$. What does this mean in context of events A and B?</p>	
G.CP.A.6	<p>An item is randomly selected from a basket of food. Let event A represent a fruit being selected, event B represent a red item being selected and event C represent a vegetable being selected. The sample space of these three events is shown below:</p> <div data-bbox="331 915 844 1230"><p>A Venn diagram illustrating the sample space of three events: A (fruit), B (red item), and C (vegetable). The diagram consists of three circles. Circle A and Circle B overlap, while Circle C is disjoint from both. The probabilities are labeled within the regions: the region of A not in B is .32, the intersection of A and B is .05, the region of B not in A is .1, and the region of C is .53.</p></div> <p>Find and interpret $P(A \text{ or } C)$</p> <p>Find and interpret $P(A \text{ or } B)$</p>	

High School Geometry

Code	Sample Stem	Explanation
	<p>A student spins two spinners, one numbered 1-8 and another with four different colors. The spinners are shown below:</p>  <p>Let A be the event that a student spins an even number on the first spinner and B be the event that a student spins the color blue on the second spinner.</p> <p>Find and interpret $P(A \text{ and } B)$</p>	
G.CP.A.7	<p>A population of 1000 people undergo a genetic test for a particular gene. The test for the genetic marker has a 1% false negative rate (that is, if they test negative, there's a 1% chance they carry the gene) and a 6% false positive rate (if they test positive, there is a 6% chance they don't carry the gene). If 20% of the population of 1000 people test positive for the genetic marker, approximately how many people have the gene?</p>	
G.CP.A.8	<p>A class of 12th grade students has been chosen to help their school with the fall concert. In a class of 25 students, 3 will be randomly selected to form the committee. There are two ways being considered to make the committee.</p> <p>One way to form the committee is to have three roles: a planner, a treasurer, and a setup manager. How many different options are there for this committee?</p> <p>The other way to form the committee is for all three selected students to be titled "committee member" with no role identified. How many different options are there for this committee?</p>
